

## Tank container (liquid products)

3 E Logistic AG is also involved in the management of chemical fluids, as well as in the disposal of fluid waste products.

The intermediate bulk containers are used especially for combined transport measures.

### (road – rail/ship – road)

The module is obtainable in the dimensions 20 or 30 foot and usually concerns pressure tanks for the transport of liquids comprising several 1000 litres. These intermediate bulk containers are specially manufactured to deal with specific products and often manufactured with several chambers.

The filling or discharging of the tank containers can be achieved by means of pumps or compressed air.

Loading by means of gravity is also possible. Special auxiliary equipment also permits loading or discharging by means of a gas balance line.

Intermediate bulk container with (MDI) in the harbour of Barcelona for shipment to Genoa (Italy).

## Tank container (liquid products)

20 foot intermediate bulk container prior to the shipment of chemical fluids in Tarragona.

Filling the bulk container by means of a gas balance line in a chemical plant in Spain.

Bulk container following completion of the loading process in the chemical plant.

Filled bulk container after loading prior to transport from Tarragona to Italy.
