

Terminals

3E Logistic AG can also provide terminal transports, for which mobile container hoists can be temporarily installed in a location that is suitable for the customer.

In the case of a large-scale project – of a duration of 3 months for example, we can provide a mobile container hoist which can be installed in the proximity of the customer or the destination (landfill) in a suitable goods station.

With our qualified crane drivers, we take over the handling of the 20, 30 or 40 foot containers and deliver your goods to the customer or the destination- according to your wishes.

Our drivers or sub-contractors are at your disposal with specialised equipment as well as normal chassis, dumping chassis and any additional equipment your require.

Upon demand, we can set up these terminals as fully equipped mobile offices with computers, printers, Internet access, telephone, fax and much more.
